- Fundamental Research
- Sustainable mobility
- Electrified Mobility
- IC powertrains

16 - 18 June 2021

16 -18 June 2021

Organized by IFPEN in a 100% virtual format

LES4ECE aims at providing a forum for exchange concerning research and development of **LES** and related experimental techniques for their application to **energy conversion in transportation applications**.

It brings together **researchers** and **engineers working in the field of simulation** to debate the state of the art in LES applied to electrical or combustion engines as well as powertrains and to examine advanced experimental techniques capable of supporting and validating its development.
