Training and Careers

Carlos Penalver, a student in IFP School's Energy Technology Economics and Management program (class of 2022) and a graduate of the *Universidad Central de Venezuela*, is one of eight [Energy Leaders for Tomorrow](#) selected by TotalEnergies.

Launched in 2013 with support from former Chairman and Chief Executive Officer of Total, Christophe de Margerie, the Energy Leaders for Tomorrow program identifies top graduates who have recently entered or are about to enter the energy sector.

As a result of this award, Carlos will receive free access to the Energy Intelligence Forum, which will take place from October 4 to 6 in London.

"This will be an opportunity to learn about trends and challenges in the energy sector and strategies for providing affordable energy while accelerating the transition to a low-carbon economy!" Carlos says enthusiastically.

"In addition, we will be discussing and networking with some of the most important and respected leaders in the energy sector," he continues.

Congratulations to Carlos on this award!
