Transport and Pollution International Conference 2025 4-6 November 2025

From TAP to TaP...

Transport and Air Pollution becomes Transport and Pollution
a more insightful vision of transport impacts!

Save the Date!

We are thrilled to announce that the 26th edition of the Transport and Pollution international conference (TaP 2025) will take place at IFP Energies nouvelles, Rueil-Malmaison (near Paris), from 4 to 6 November 2025 in person.

IFP Energies nouvelles, a major European player in the characterization of transport emissions, their simulation and mitigation in order to improve the environmental efficiency of transport, is very proud to welcome the Transport and Pollution international conference for the first time to its headquarters.

Join us for this new edition, during which experts from around the world will gather to share the latest

scientific and technical advances in the study of transport impacts, with for the first time a focus beyond the air quality to also consider noise, soil and water.

Topics

For over two decades, TAP international conferences have focused on emissions from transportation and their impact on air quality, covering a range of critical topics. Sessions will continue to cover essential topics, including new emission control concepts, measurement (among which remote sensing), decarbonization, non-exhaust emissions and new worldwide regulations.

This year, we are pleased to put emphasis on two focal themes:

Assessment and modeling of emissions, fate and trends: Measurement campaigns, emission factors, impact of usage conditions; Exhaust and non-exhaust emissions from tire and brake; Primary and secondary aerosols and contribution to their formation; Regulated and non-regulated pollutants with a significant impact on air quality and health

Comprehensive Environmental and social impacts of transports: Scope extended beyond air quality, considering all forms of induced impacts (air, water and soil pollution, noise, etc.); Environmental and Social Life Cycle Analysis; CO2 footprint of remediation solutions; Mobility management, role of digitalization and big data; Innovative digital tools and methodologies as decision-making tools.

Stay tuned!

Save the date and get ready for exciting and insightful discussions, cutting-edge research attending **the TaP 2025 international conference!**

Stay tuned for further details and registration information.
