

Panorama of energies and transport technologies: definitions, challenges, markets, environmental footprint, outlook.

CLIMATE, ENVIRONMENT AND CIRCULAR ECONOMY

- CO₂ capture, utilization and storage
- Energy storage
- Critical metals and rare earths
- Plastic recycling
- Water cycle management
- Soil carbon sequestration

RENEWABLE ENERGIES

- Biofuels and e-fuels

- Biogas and biomethane
- Bio-based chemistry
- Wind power
- Wave energy
- Geothermal
- Hydrogen

TRANSPORT

- Hybrid vehicles (currently being updated)
- Electric vehicles
- *Connected and driverless vehicles* (currently being updated)
- Internal combustion engines

FOSSIL ENERGIES

- Oil
- Natural gas
