Plastics recycling

PLASTICS RECYCLING OUR STRENGTHS

IFPEN applies its long-standing expertise in **a variety of specific areas** to the chemical recycling of plastics:

- chemicals and chemical engineering,
- catalysis (homogeneous, heterogeneous),
- analysis,
- process engineering,
- dimensioning of pilot units.

This expertise has already been demonstrated via IFPEN's achievements **in the field of process development**. The homogeneous catalysis units developed by [Yves Chauvin's team](#) are worthy of mention here.

IFPEN teams combine complete mastery of the development chain, from laboratory through to demonstrator, with a technical and economic approach incorporating **life cycle analyses**.
